

## Instructions

Start by creating a GitHub repo named suavecita-x-frida, including a readme and .gitignore for nodejs.

On your local machine create a react app named suavecita-x-frida

Set your remote origin

If using a Mac, please be sure to ignore the .ds\_store file

Put all CSS in an external stylesheet, or use <https://styled-components.com/>. Do not use inline styles, and don't use any CSS frameworks.

Make the app look like the included frida\_design.pdf

Once complete, push all code up to the repo and email a link to the repo to ken@suavecito.com

Notes:

- Don't worry about matching the fonts exactly, just pick web safe system fonts that are similar
- Don't worry about the background patterns matching exactly
- Feel free to use modern CSS like flex-box or CSS grid, but do not use any frameworks.
- For devices smaller than an iPad, make the 2 column sections switch to a single column layout
